

HIAB (Lorry Loader)

Format: 1 day

No. of participants: Up to 6 or 3

Certification: ASL Safety & Training / RTITB Certification

Objective

To ensure that all participants are trained in the correct and safe operation of a variety of lorry loaders.

Background

The term lorry loader covers an extraordinary range of equipment. The smallest compact lorry loaders are fitted to builders' pick-up trucks and vans often with a lifting capacity of less than 500 kilograms and are manually operated. This contrasts with a top-of-the range lorry loader fitted to a purpose-built tractor or four axle truck. These could be fitted with a knuckle boom and up to 8 hydraulic extensions lifting in excess of 150 tones, and with a reach over 30 meters.

The complexity of operating the various machines that fall into this category highlight the wide variety of skills required.

Course Includes:

Theory:

- Duties of operator
- Responsibilities of operator
- Pre-Shift inspections
- Maintenance of machines
- Hazards associated when operating the machine

Practical:

- Inspections of machine before use
- Risk assessment in working environment
- Wearing of correct PPE

- Loading / Unloading of different types of loads when using chains or slings
- Recognition and use of approved hand signals

Participants must bring the following on the day of training:

- Passport Photo
- Current Safe Pass is Advisable
- Personal Protective Equipment

Participants must be aged 18 years or over
